CORPORATION™**

# Choose Excellence, Expect Value

Surgical Specialties Corporation is the world's largest independent suture manufacturer. While headquartered in Westwood, Massachusetts, SSC is a global company with development and manufacturing facilities in the United States, Germany, Mexico, China, and the United Kingdom.

We design and manufacture high performance wound closure products including QUILL™, Sharpoint™, and LOOK™ brand sutures.

We are pleased to offer the new Sharpoint™ PLUS suture portfolio featuring German engineered needles.

Our philosophy is that performance doesn't have to be expensive.

# Advanced Needle Technology

Quill™ needle performance is an output of its design. Materials, geometry, and coatings work together to produce a high performance surgical instrument.

## Proprietary Stainless Steel Alloy

Quill™ needles are forged from an alloy of Iron, Nickel, and Chromium. Each element serves a role in delivering strength, ductility, and hardness.

Strength

Ductility

Hardness

# Needle Anatomy And Terminology

## Needle Terminology

**Length:** Distance measured along the circumference of the needle, from the point to the swage. It is depicted on the packaging.

**Shape:** Different surgeries or surgical techniques demand different needle shapes.

**Point:** The sharpened part of the needle that first penetrates the tissue. The point consists of the area from the sharpened tip of the needle to the widest cross section of the needle body. The point determines ease of penetration and the initial size and shape of the hole.

**Swage:** Connection point of the suture and the needle. Micro teeth grip the suture material and prevent it from slipping out.

**Wire Diameter:** Gauge or thickness of the wire originally used to form the needle body.

**Body:** The part between the point and the swage of the needle.

**Included Angle (Curvature):** The fraction of the circle included in the curve of the needle. This is depicted on the packaging.

## Needle Anatomy

## Needle Shapes and General Uses

Straight (aka: Keith): Skin Closure

3/8 Circle: Skin Closure, Ophthalmic

1/2 Circle: Skin Closure, GI, Cardiovascular, Ophthalmic

5/8 Circle: Robotics and Laparoscopic

# Needle Points And Cutting Edges

Needle Type	Point Geometry	Description	Commonly Used For
Precision Conventional Cutting	▲	Triangular point with cutting edge on the inner curvature and precision-honed for added sharpness	General skin closure, subcutaneous tissue, sometimes for ophthalmic surgery, plastic or reconstructive surgery
Reverse Cutting	▽	Triangular point with cutting edge on the outer curvature	Skin closure, ligamentous or fibrous tissues
Precision Reverse Cutting	▽▽	Triangular point with cutting edge on the outer curvature and precisioned for added sharpness	Primarily used in plastic surgery for delicate procedures and where a good cosmetic result is desired
Taper Point	●	Round shaft, straight or curved, taper point with no cutting edge	Soft tissue closure such as fascia, vascular, gastrointestinal, and most soft tissue below the skin
Taper Cutting	▽▽▽	Four (4) cutting edges with a taper shaft	For penetration through tough tissue
Spatula	▽▽▽▽	Spatula needle with the cutting edge on the inner or outer curvature	Ophthalmic and microsurgery
